- Platforms & Tools: Optimizely DXP, EPiServer CMS, Azure DevOps, Git, Bitbucket, SonarLint, SonarCloud
- Delivery: Agile/Scrum, code reviews, architecture standards, task estimation, QA collaboration, developer support

WORK EXPERIENCE

Full-Stack Developer / Engineer Amman, Jordan	Digital Gates	02/2022 - Present
- Major contributor to SpeedyHire, the largest project in my portfolio, delivering front-end and full-stack improvements across high-traffic hiring workflows. - Optimized SpeedyHire heavy web pages by greatly reducing HTML document weight and turning slow, complex page loads into a smoother, faster user experience. - Develop and consume REST APIs, implement business logic, and deliver production features using C#, ASP.NET Core, .NET Core 3-10, and EF Core. - Own the SpeedyHire front-end architecture and related technical aspects, including standards, implementation quality, reusable workflows, linting practices, and technical documentation. - Build responsive, pixel-perfect user interfaces with HTML, CSS/SCSS, jQuery, React, Next.js, and TypeScript from Figma and business requirements. - Estimate epics and features, split them into user stories and tasks, and support Agile delivery through sprint planning, reviews, and retrospectives. - Provide senior support through code reviews, pair programming, mentoring, SonarLint/SonarCloud quality checks, QA coordination, and technical guidance across development teams. - Work on performance-minded Next.js delivery using SSR, client rendering, static generation, incremental static regeneration, caching, and modern UI libraries. - Support Optimizely DXP work across CMS content, catalogs, personalization, and digital commerce features, including ongoing solution maintenance. - Build POCs for digital transformation projects, evaluating technical capabilities, limitations, and implementation risks for business decision-making.		
Full-Stack Developer Amman, Jordan	CSC Beyond / NCIT Solutions	01/2021 - 07/2021
- Delivered front-end website features using HTML, CSS, Bootstrap, WordPress, JavaScript, and jQuery while refining existing designs into functional pages. - Built back-end and database-driven features using PHP, APIs, SQL-based databases, MySQL, Microsoft Access, and custom project structures. - Implemented AJAX requests for dynamic content, improved data display behavior, debugged web issues, and handled FTP/SFTP, SSH, cPanel, and server workflows. - Worked with JavaScript Chrome extension features and contributed across Laravel, custom framework, and React-related project work.		
Full-Stack Developer Amman, Jordan	Al Hussein Technical University	06/2020 - 10/2020
- Built PHP full-stack project work covering front-end screens, back-end logic, database interaction, and complete-cycle delivery. - Strengthened professional communication, reporting, presentation, time management, and team collaboration through applied project work.		

EDUCATION

Bachelor's Degree in Electrical Engineering

2012 - 2017

University of Jordan

Graduation Project: MBD-RS, a music-based device for running sport that combines beta binaural beats with motivational background music to produce modified audio designed to stimulate runners and support brain activity.
